

Milk Sanitation Honor Roll for 1961-62

Twenty-eight communities have been added to the Public Health Service milk sanitation "honor roll," and 65 communities on the previous list have been dropped. This revision covers the period from January 1, 1961, to December 31, 1962, and includes a total of 228 cities and 107 counties.

Communities on the honor roll have complied substantially with the various items of sanitation contained in the milk ordinance recommended by the U.S. Public Health Service. The State milk sanitation authorities concerned report this compliance to the Service. The rating of 90 percent or more, which is necessary for inclusion on the list, is computed from the weighted average of the percentages of compliance. Separate lists are compiled for communities in which all market milk sold is pasteurized, and for those in which both raw milk and pasteurized milk are sold.

The recommended milk ordinance, on which the milk sanitation ratings are based, is now in effect through

This compilation is from the Milk and Food Branch, Division of Environmental Engineering and Food Protection, Public Health Service. The previous listing, with a summary of rules under which a community is included, were published in Public Health Reports, September 1962, pp. 823-825. The rating method is described in PHS Publication No. 678 (Methods of Making Sanitation Ratings of Milksheds).

voluntary adoption in 512 counties and 1,435 municipalities. The ordinance also serves as the basis for the regulations of 37 States. In 16 States it is in effect statewide.

The ratings do not represent a complete measure of safety, but they do indicate how closely a community's milk supply conforms with the standards for grade A milk as stated

in the recommended ordinance. High-grade pasteurized milk is safer than high-grade raw milk because of the added protection of pasteurization. The second list, therefore, shows the percentage of pasteurized milk sold in a community which also permits the sale of raw milk.

Although semiannual publication of the list is intended to encourage communities operating under the recommended ordinance to attain and maintain a high level of enforcement of its provisions, no comparison is intended with communities operating under other milk ordinances. Some communities might be deserving of inclusion, but they cannot be listed because no arrangements have been made for determination of their ratings by the State milk sanitation authority concerned. In other cases, the ratings which were submitted have lapsed because they are more than 2 years old. Still other communities, some of which may have high-grade milk supplies, have indicated no desire for rating or inclusion on this list.

Communities awarded milk sanitation ratings of 90 percent or more, and date of rating for 1961-62

¹ Figures in parentheses show the percentage of the milk pasteurized.

milk requirements, of the milk ordinance recommended by the U.S. Public Health Service.

NOTE: In these communities the pasteurized market milk shows a 90 percent or more compliance with the grade A pasteurized milk requirements, and the raw market milk shows a 90 percent or more compliance with the grade A raw

Notice particularly the percentage of the milk pasteurized in the various communities listed. This percentage is an important factor to consider in estimating the safety of a city's milk supply. All milk should be pasteurized, whether commercially or at home, before it is consumed.
